ONESOUND WIREFRAME

## PLEASE GENERALLY FOLLOW THESE GUIDELINES (MORE DETAILS BELOW)

Points to Note

1. For the iOS app, we would like to see the use of blurs or tint on background images throughout your design
2. User images should be circles, and song images should be rectangles (which can have rounded corners, too)
3. We have decided to remove down votes. There are now only up votes on songs
4. This is just a rough idea of what we want in our final design, please feel free to position things as you would like. But do not change the navigation we have decided on without a very good reason
5. Sorry for the lack of guidance until now, and we can't wait to see the updated designs!

List of nearby parties
by default, or if
searching by name
then those search
results

1. The home screen is where users will first enter the app when they don't have a party
2. This screen will also be shown when a user leaves a party and must find another one
3. The background should be an iOS8-style blurred partying/music image
4. Initially the closest parties will be shown, but when searching by name they will be replaced

There shouldn't actually be a gap there,
this is just there to emphasize that
the table could (as per designers choice)
either have a clear background that shows
the blurred party image, or it can have a
non-clear background. Do whatever looks
best

results
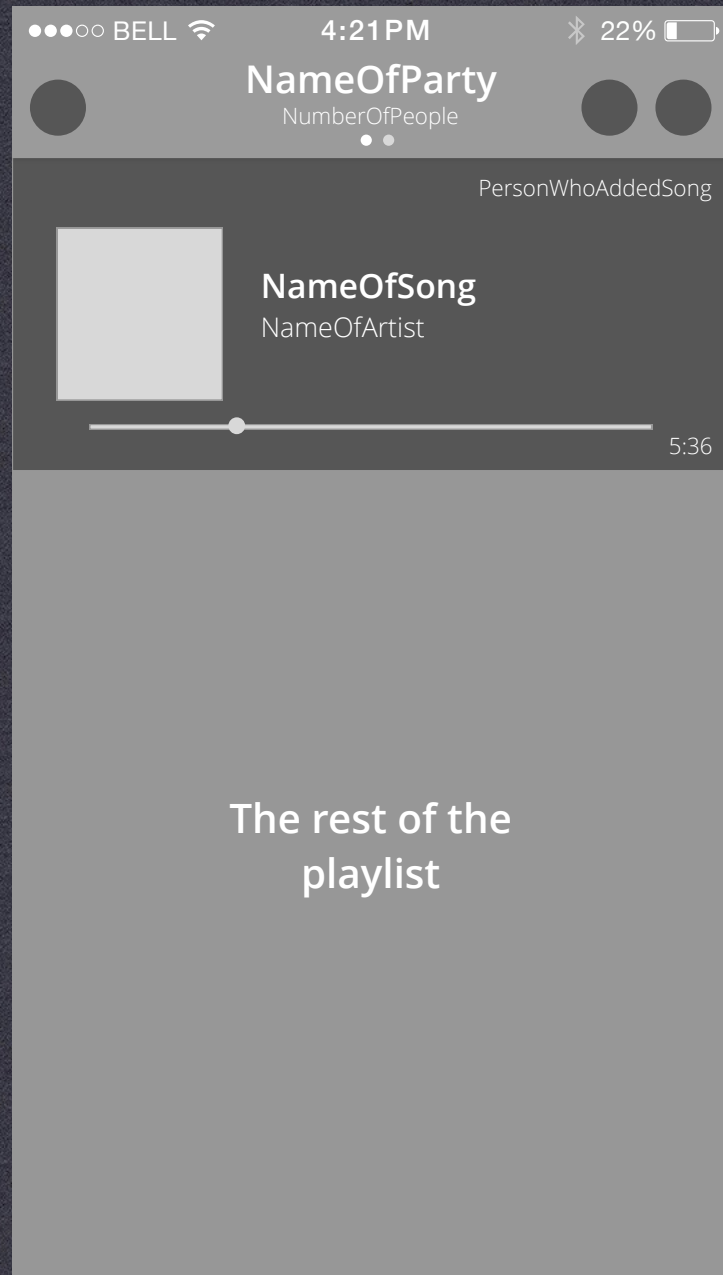

Party

1. Swiping left/right in the party will go from "Playlist" to "Members, as shown by the two dots below "NameOfParty"
2. The song shown on top is the current song playing
3. Only the party host will see the current time in the song. They will also need a way to play/pause (maybe the image)
4. The background of the current song is a larger blurred image of the smaller one that's next to "NameOfSong"

Lists, with one of the
following selcted at a time:
-->users who follow them
-->users they follow
-->favorited songs
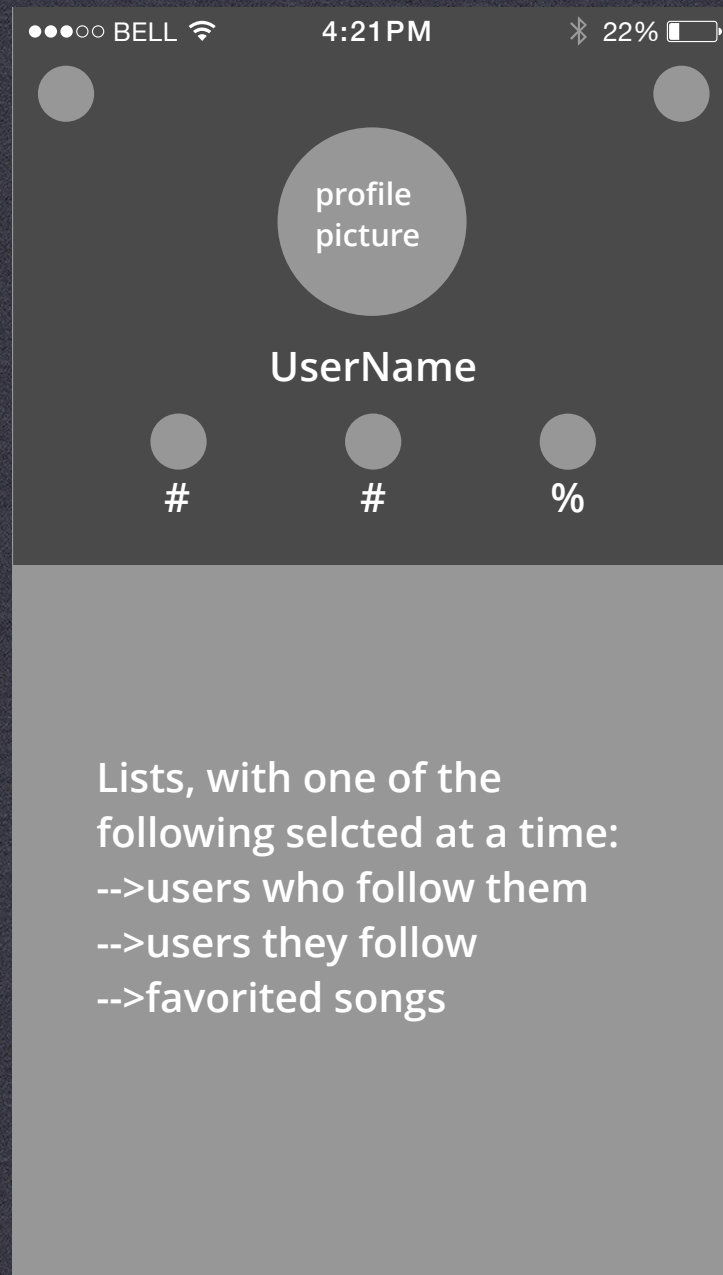

1. **The list we would like to see designed is showing the other users who follow them**

2. **This screen will be for both looking at other peoples profiles, and your own profile. Specifically for the design contest, do the design for a user's own profile**

3. **The area behind the profile picture should be an enlarged and dark-blurred version of the profile picture**
